

PERSONA TEST

Decision Bajo Presion - Persona Test Log

Laura's ordered walkthrough, ranked findings, P01 correction, and public retest.

Submission detail	Value
Author	David Buzali
Coursework	Week 6 individual working slice
Product	Decision Bajo Presion
Live URL	https://decision-bajo-presion-week-6.vercel.app

Deployment	Deployment 2 - verified Ready
Data boundary	Synthetic demonstration records only

Prepared for final Week 6 submission.

Persona test - Laura Hernández

Date: 2026-09-16 Method: synthetic in-chat persona walkthrough requested by the user Deployment shown: Deployment 1 at <https://decision-bajo-presion-week-6.vercel.app>

This is not a real participant interview. The pass uses only the five ordered public screenshots below and the declared persona. A capture setup error initially failed to carry Laura's reduced-motion choice into later screens; the images were regenerated before this final pass. The final observations do not include the artificial motion-setting contradiction.

Persona

Laura Hernández is 47, a primary-school teacher and brigade volunteer in CDMX. She uses WhatsApp and school platforms, has never played a 3D game, reads instructions carefully, dislikes being judged by software, and has mild motion sensitivity. She prefers reduced motion and ordinary buttons; voice is optional, not assumed to be more accessible.

Screens reviewed in order

1. Safe start
2. Baseline decision
3. Human debrief
4. Unseen retest
5. Evidence comparison

In-character walkthrough

Screen 1 - Safe start

*"I understand that this is a practice exercise using fictional data and that it does not certify how prepared I am. I would choose **Movimiento reducido** and **Vista plana**, leave voice off, and then press **Comenzar ensayo**. The selected radio controls are clear. I understand that I may pause or leave without penalty, although I do not yet see the pause button. I am slightly unsure whether my preferences apply as soon as I select them or only after I begin."*

Laura proceeds. The safety boundary reduces concern about being judged, and the non-3D route is discoverable before entry.

Screen 2 - Baseline decision

*"I see that this is decision 1 of 3, and the screen confirms **Vista plana** and **Movimiento reducido**, so I trust that my preferences worked. I also notice **Pausar y salir** immediately. I would choose **Observar el entorno y seguir la instrucción vigente**. The phrase 'Tu selección se registra una vez' tells me the choice matters, but I hesitate because I do not know whether clicking records it immediately or whether I can correct an accidental click."*

Laura proceeds, but the irreversible-selection model adds avoidable hesitation.

Screen 3 - Human debrief

*"I understand that the system is showing the three actions and relative times without judging my intention, emotion, or ability. The simulated AI proposes one topic, but a person makes the final decision. I would not press **Confirmo que ocurrió el debrief humano** until I had actually spoken with the responsible person. If that person were not available, I would stop here. I do not see **Pausar y salir** or another clear way to leave without falsely confirming that the conversation happened."*

This is the only observed blocker. The screen correctly protects the human gate, but it removes the safe exit precisely when an external person may be unavailable.

Screen 4 - Unseen retest

*"I understand that this is a different situation and one new decision. The screen still confirms **Vista plana** and **Movimiento reducido**, and **Pausar y salir** is visible. I would choose **Verificar y seguir la ruta temporal señalizada**. The labels about simulated AI and physical testing tell me that success here still does not prove physical readiness. I still hesitate briefly because selecting appears immediate and final."*

Laura proceeds and correctly understands the retest boundary.

Screen 5 - Evidence comparison

*"I understand that the behavior appeared after the debrief in the new simulation, but it is not a certification. **Pendiente de validación física** is prominent, and the explanation says that the software cannot close the finding. I would wait for the responsible person to arrange the physical micro-drill. I do not see a digital decision to make, but I would like an unmistakable message that the digital part is finished and a safe way to return to the beginning."*

Laura clearly distinguishes simulated improvement from pending physical validation. The remaining issue is closure of the digital session, not closure of the safety finding.

Observation log

Screen	Attempted action	Confusion or hesitation	Severity	Evidence	Fix decision
1	Select reduced motion, flat view, keep voice off, begin	Unsure whether preferences apply immediately or on start	slows/confuses	Controls are clear, but copy says only that preferences exist during the session	Clarify that selections apply when the rehearsal begins
1	Locate the promised pause/exit path	Promise is visible, but control is not present yet	slows/confuses	"Puedes pausar o salir sin penalización" without a visible exit control on this screen	Explain that the control appears during rehearsal, or provide a safe exit consistently
2	Select "Observar el entorno..."	Unsure whether one click records immediately and whether an accidental choice can be corrected	slows/confuses	"Tu selección se registra una vez"; no separate confirmation step	State "Al seleccionar, se registra de inmediato" or add a pre-record confirmation pattern
2	Pause if uncomfortable	No confusion	none	Pausar y salir is prominent; reduced-motion and flat-view badges are consistent	Preserve placement and labeling
3	Wait for and complete the human debrief	If the responsible person is unavailable, Laura cannot continue honestly and sees no pause/exit path	blocks completion	Human confirmation is required; screenshot has no Pausar y salir or equivalent safe exit	Highest-priority fix: retain a clear pause/exit path without bypassing the human gate
3	Interpret the adaptive focus	No important confusion or sense of automated judgment	none	"IA simulada - la decisión final es humana" plus non-diagnostic trace copy	Preserve these boundaries
4	Select the temporary -route verification	Immediate, irreversible recording still causes brief hesitation	slows/confuses	Same one-time recording copy; no confirmation step	Use the same recording clarification chosen for Screen 2
4	Understand simulation limits	No confusion	none	IA simulada and Requiere prueba física appear together	Preserve both labels
5	Hand off to the physical micro-drill	Unsure whether the digital session is formally finished or how to return safely	slows/confuses	No final navigation control; software correctly offers no approval control	Add explicit "La parte digital terminó" copy and a non-approval return-to-start action

Screen	Attempted action	Confusion or hesitation	Severity	Evidence	Fix decision
5	Interpret the result	No confusion: simulated improvement remains distinct from physical validation	none	Approved evidence statement is visually separated from Pendiente de validación física	Preserve this hierarchy and wording

Required checks

- **Notices Pausar y salir:** yes on Screens 2 and 4; its absence on Screen 3 becomes the principal blocker.
- **Can avoid motion and 3D:** yes. Laura finds both settings before entry, and subsequent screens visibly preserve **Movimiento reducido** and **Vista plana**.
- **Understands when a decision is recorded:** partially. She understands that selection is recorded once but hesitates about whether activation is immediate and reversible.
- **Distinguishes simulated improvement from pending physical validation:** yes. Screens 4 and 5 make the distinction clear.

Highest-severity finding

P01 - The required human-debrief screen has no visible pause or exit path.

Severity: blocks completion.

The human gate must remain non-bypassable, but Laura may reach it before the responsible person is available. Without a safe exit, she must either abandon the tab without guidance or falsely confirm that the debrief occurred. The recommended fix is to preserve the gate while making **Pausar y salir** available on Screen 3. This outranks the non-blocking D01 dependency warning and the lower-severity recording/closure ambiguities.

Retest status

Completed locally on 2026-09-16 and repeated against public Deployment 2 on 2026-09-17 after the P01 correction.

Screen 3 retest after P01 correction

Evidence: Changed human-debrief screen captured from Deployment 2

*"I can see **Pausar y salir** before I confirm anything. If the responsible person is not available, I can pause, choose whether to resume or leave without saving, and I do not have to claim that the conversation happened. When I resume, I return to the same review and still must confirm the real debrief before the new scenario begins."*

The affected screen was repeated with Laura's original instructions and accessibility choices. The retest verified that:

- **Pausar y salir** is visible on the human-debrief screen.
- Pausing creates no decision or debrief confirmation.

- The confirmation control is unavailable inside the pause overlay.
- Resuming returns to the human-debrief screen with the observable trace intact.
- The unseen retest remains inaccessible until **Confirмо que ocurrió el debrief humano** is explicitly activated after the real conversation.

Retest outcome: P01 reduced from `blocks completion` to `none` on the affected task. The public browser flow confirms that the human gate remains non-bypassable. The lower-severity recording-timing and final-session-closure observations remain open and do not block Deployment 2.

Verified correction evidence

The screenshot shows the 'Pantalla 3 de 5 - Revisión Humana' screen. At the top left is the 'DBP Decisión Bajo Presión' logo with the subtitle 'Prototipo - datos ficticios'. At the top right is a red button labeled 'II Pausar y salir'. Below the header, it says 'PANTALLA 3 DE 5 - REVISIÓN HUMANA'. The main title is 'Lo que ocurrió en el escenario inicial'. Below the title is a subtitle: 'Esta secuencia describe acciones registradas y tiempo relativo. No interpreta intención, emoción ni capacidad personal.' To the right of this subtitle is a green badge that says '3 eventos observables'. The screen is divided into three main sections:

- EVIDENCIA DE ESTA SESIÓN**
 - Secuencia observable**
 - 1 Inicio de la alerta** (0,1 s): Observar el entorno y seguir la instrucción vigente. Entrada: control visible.
 - 2 Cambio de ruta** (0,2 s): Intentar pasar por la salida obstruida. Entrada: control visible.
 - 3 Conteo del grupo** (0,2 s): Reportar la diferencia y pedir apoyo coordinado. Entrada: control visible.
- IA SIMULADA — LA DECISIÓN FINAL ES HUMANA**
 - Foco propuesto para el debrief**
 - Comprobar el estado de la ruta**: Observar cómo se verifica una ruta cuando la condición esperada cambia.
 - Text: 'La propuesta proviene únicamente de las tres acciones permitidas registradas arriba. No muestra el próximo escenario ni su respuesta.'
- PUNTO DE CONTROL HUMANO**
 - Debrief humano requerido**
 - Text: 'Antes de continuar, una persona responsable debe revisar la secuencia con el participante: qué cambió, qué información faltó y qué coordinación fue necesaria.'
 - Button: 'Confirмо que ocurrió el debrief humano'

Deployment 2 - Screen 3 with Pausar y salir visible while the human-debrief gate remains required.
